

Problem 1: Student Course Registration API

Problem Description

Develop a RESTful Web API to manage **student course registrations** in a university system. The API should allow registering students and viewing registration details.

Entity: StudentRegistration

Property	Data Type
StudentId	int
StudentName	string
Email	string
CourseCode	string
Semester	int
RegistrationDate	DateTime

API Documentation

1. Register a Student

Endpoint: POST /api/registrations

Validations (Mandatory using FluentValidation):

- StudentName is required and must contain **minimum 3 characters**
- Email is required and must be in a **valid email format**
- CourseCode is required and must be **exactly 6 characters**
- Semester must be between **1 and 8**
- RegistrationDate must **not be a future date**

Expected Response:

- 201 Created for valid input
 - 400 Bad Request with validation messages for invalid input
-

2. Do Create all necessary APIs with proper validations.

Example:

Get All Registrations [Endpoint: GET /api/registrations]

Get Specific Registrations [Endpoint: GET /api/registrations/101]

Delete Registrations [Endpoint: DELETE /api/registrations/101]

Update Registrations [Endpoint: PUT /api/registrations/102]
