

Problem 2: Employee Leave Management API

Problem Description

Create an API to manage **employee leave applications**, including leave submission and retrieval.

Entity: LeaveApplication

Property	Data Type
LeaveId	int
EmployeeId	int
EmployeeName	string
LeaveType	string
FromDate	DateTime
ToDate	DateTime
Reason	string

API Documentation

1. Apply for Leave

Endpoint: POST /api/leave

Validations:

- EmployeeName is required
- LeaveType must be one of the following values:
Casual, Sick, Earned
- FromDate must be **earlier than ToDate**
- Total leave duration must **not exceed 10 days**
- Reason must contain **at least 10 characters**

Expected Response:

- 200 OK for successful submission
 - 400 Bad Request with validation errors
-

2. Get Leave Applications by Employee

Endpoint: GET /api/leave/employee/{employeeId}

2. Do Create all necessary APIs with proper validations.

Example:

Get All Leaves [Endpoint: GET /api/Leaves]

Delete Leaves [Endpoint: DELETE /api/LeaveDelete/101]

Update Leave [Endpoint: PUT /api/LeaveUpdate/102]
